(Distribution & Retail Supply Licensee)

Filing of ARR & Proposed Tariffs
for
Retail Supply Business for FY 2013-14

5th January 2013

**BEFORE THE HONOURABLE ANDHRA PRADESH ELECTRICITY REGULATORY
COMMISSION**

AT ITS OFFICE AT 5th Floor, Singareni Bhavan, Red Hills, Hyderabad - 500 004

FILING NO._____/2013

CASE NO. _____/2013

In the matter of:

Filing of the ARR & Tariff applications for the Retail Supply Business for the year FY 2013-14 under Multi-Year Tariff principles in accordance with the “Andhra Pradesh Electricity Regulatory Commission (Terms And Conditions For Determination Of Tariff For Wheeling And Retail Sale Of Electricity) Regulation, 2005” by the Central Power Distribution Company of Andhra Pradesh Limited (‘APCPDCL’ or ‘the Company’ or ‘the Licensee’) as the Distribution and Retail Supply Licensee.

In the matter of:

CENTRAL POWER DISTRIBUTION COMPANY OF ANDHRA PRADESH LIMITED
... Applicant

The Applicant respectfully submits as under: -

1. This filing is made by the **CENTRAL POWER DISTRIBUTION COMPANY OF ANDHRA PRADESH LIMITED (APCPDCL)** under Section 61 of the Electricity Act 2003 for determination of the Aggregate Revenue Requirement (ARR) and Tariff for the Retail Supply Business for the year FY 2013-14.

2. The licensee has adopted the following methodology to arrive at the ARR for retail supply business.
 - **Distribution Cost:** The licensee has considered the figures as per the Distribution Tariff Order dated 20th March, 2009 issued by APERC for the period from FY 2009-10 to FY 2013-14.

- **Transmission Cost:** The licensee has considered the figures as per the Transmission Tariff Order dated 20th March, 2009 issued by APERC for the period from FY 2009-10 to FY 2013-14.
 - **SLDC Cost:** SLDC costs have been projected based on the SLDC Charges Order for FY 2009-10 to FY 2013-14 issued by APERC.
 - **PGCIL and ULDC Costs:** PGCIL and ULDC costs have been projected for FY 2012-13 H2 and FY 2013-14 based on the H1 actuals of FY 2012-13.
 - **Distribution losses:** The licensee has considered the loss figures as per the revised MYT voltage wise losses as approved by Hon'ble Commission for the period FY 2010-11 to FY 2013-14 given in Annexure-C of the Tariff Order for 2010-11 issued by APERC. Whereas, actual losses are different from approved losses. The additional power purchase to cover the difference in losses is not accounted for in this filing. Hence, the Licensee humbly requests Hon'ble Commission to consider either projection based on actual losses achieved in last year or alternate mechanism to compensate the additional power purchase cost due to difference in loss.
 - **Transmission losses:** The licensee has considered the loss figures as per the Transmission Tariff Order for FY 2009-10 to FY 2013-14 issued by APERC.
 - **PGCIL Losses:** The Licensee has projected External (PGCIL) losses at 4.60% based on the first half actual of FY 2012-13.
3. As per Regulation No. 4 of 2005, the licensee is required to file the Aggregate Revenue Requirement (ARR) for Retail Supply Business for the entire control period i.e., for the period FY 2009-10 to FY 2013-14. However, the licensee had requested the Hon'ble Commission to allow it to submit the ARR for Retail Supply Business till FY 2012-13 on yearly basis, instead for the entire control period due to the reasons as mentioned below:

a. Significant uncertainty prevalent on the availability of energy as well as the cost of power purchase for the 2nd Control Period:

- i. Availability of Energy:** Uncertainty in likely commissioning dates of AP Genco Stations, Central Generating Stations, UMPPs and others. Timely

commissioning of the new stations is likely to have material impact on the power purchase costs of the licensee.

- ii. **Power Purchase Costs:** The Order on Generation Tariffs based on the Generation regulation is yet to be passed by APERC. Hence the quantum of deviations between the generation tariffs used in the projections and the approved costs are likely to be magnified if the power purchase costs are to be projected over the entire 2nd control period.

As can be seen from the points mentioned above, there is a scope of significant variation in the power purchase costs of the licensee, if the projections of power procurement are done for the entire control period.

b. Regulatory objectives of a Multi-Year Tariff Regime not met:

- i. **Mechanism of Incentivization:** One of the essential elements in Multi-Year Tariff regime is the mechanism of incentivizing the performance of the licensee vis-à-vis the targets set by the Hon'ble Commission. This approach is more suited in a distribution business where the costs to a large extent are treated to be controllable. However in retail supply business, power purchase costs' being an uncontrollable factor is not amenable to fixation of targets and hence does not meet the intended objective of bringing in operational efficiencies in licensee.
- ii. **Tariff Certainty:** This is one of the other objectives intended to be achieved through a multi-year tariff regime. This is well addressed in the distribution business where the wheeling tariffs are set based on the controllable costs. In retail supply business, apart from the cost of service, the retail tariffs are also dependent on external factors such as the subsidy support from the GoAP and cross subsidy levels across the consumer categories. Hence the objective of providing tariff certainty to consumers would be difficult to be achieved in Retail Supply Business till there is clarity on the above factors, most importantly on cost of service (for which the major factor is power purchase cost).

The Hon'ble Commission has been kind enough in granting permission to submit the ARR & Proposed Tariff filings in respect of the Retail Supply Business till FY 2012-13 on yearly basis instead of total control period of FY 2009-10 to FY 2013-14.

4. In the following paragraphs, the licensee has provided a brief summary of its performance during FY 2012-13 as against the Tariff Order targets as well as the expected performance for the current year i.e. FY 2012-13 and projections for FY 2013-14.

5. Summary of the Filing

Performance Analysis of CPDCL for the Previous Year FY 2011-12 and Current Year FY 2012-13

Performance Analysis: A brief analysis of the key elements of licensee's business is as follows:

- **Sale of Energy and loss reduction:**

The licensee is expecting shortfall in percentage metered sales from the APERC target primarily due to higher level of load shedding undertaken in FY 2012-13 and increase in agriculture sales.

The licensee has followed the agreed methodology for estimation of agricultural sales and has been regular in submitting the required information to the Hon'ble Commission. The licensee

also submits that the new methodology developed by ISI for estimation of agricultural sales would be rolled out by next year. Further, the licensee is in the process of releasing 49,997 new agricultural connections during FY 2012-13. In view of this, the licensee requests the Hon'ble Commission to revisit the level of agricultural sales approved for APCPDCL and treat it appropriately.

- Power Purchase Cost Estimate for the state of AP for FY 2012-13**

During the current year, the state has witnessed severe power deficit due to the following reasons:

- Reduction in energy availability from gas based IPP's due to the shortage in availability of gas. Availability from these stations has been estimated to operate at around 30% in FY 2012-13 H2 PLF resulting in energy shortfall of 1,275 MU compared to approved energy of 4,420 MU.
- Reduction in availability from Hydel Sources due to shortfall in rainfall resulting less availability of water in the reservoir. As per the revised estimate, around 3,500 MU of energy is estimated to be available in 2012-13 as against 6,407 MU approved energy in the Tariff Order.
- Higher quantum of actual agricultural sales than approved agriculture sales has also resulted in a deficit.

Increase in average procurement cost from short term sources to Rs. 5.11/ unit as against estimated of Rs. 4.17/ unit. Thus, the energy deficit is projected to be significantly higher than that had been projected in the Tariff Order and this will result in severe shortfall during the current year. Some of the shortfall is being procured from external purchases at an estimated average price of Rs. 5.11 / kWh. Around 13,000 MU is expected to be procured from short term sources during FY 2012-13. No additional energy can be procured due to non-availability of power in SR and grid constraints from NEW to SR. These short term procurements alone would not be sufficient to meet the entire energy deficit. Hence, to bridge the energy deficit, Load Restrictions are imposed on several categories as per Hon'ble Commission's order on R&C.

The estimated energy deficit in Million Units (MU) for the current year at the state level is as per the table shown below:

Particulars	2012-13
Energy Requirement (MU)	95,051
Energy Availability from Long term sources (MU)	70167
Deficit (-)	24,884
Bilateral Purchases	12,757
Load Restrictions	12,127

Also, due to the increase in coal price and use of imported coal, the weighted average power purchase cost in FY 2012-13 has increased to Rs. 3.65/kWh as against the Tariff Order approved value of Rs. 3.10/kWh at the state level.

The impact of the power purchase cost for CPDCL will mirror the changes in cost for the state since most of the generation sources are allocated on a pro-rata basis to all the licensees.

- Net profit or loss during the year**

As against the revised estimate of regulatory gap, Licensee is recovering power purchase cost deviations through Fuel Surcharge Adjustment (FSA) as applicable and determined by Hon'ble Commission. The balance gap should be recovered through separate true-up exercise which will be filed separately for distribution and retail supply business.

6. The estimated revenue gap for the licensee for the current year is shown in the table below:

Estimates for the Ensuing Year (FY 2013-14)

The licensee has adopted a modified trend approach for projecting the category-wise sales for the ensuing year. As the name suggests, the licensee has considered the historical growth trend observed in the sales of categories adjusted for load relief given during last 12 months i.e H2 of 2011-12 and H1 of 2012-13 and the same has been moderated based on the other relevant inputs such as underlying economic growth drivers, number of pending applications etc. The total sales forecast (unrestricted) for key categories is as follows:

Consumer Categories	FY 2012-13 (Unrestricted) (In MU)	FY 2013-14 (Unrestricted) (In MU)
L.T. Supply	21,153.69	23,531.94
Domestic Supply	7,355.42	8,672.58

Non-Industrial	1973.85	2211.23
Total	35,392.40	39,646.66

Considering the requirement and total energy availability from all sources month wise, the licensee has proposed to impose Restriction & Control (R&C) measures to meet the energy deficit on the following consumer categories for H2 FY 2012-13 and FY 2013-14.

- LT
 - LT-I : Domestic
 - LT-II : Non Domestic/Commercial
 - LT-III : Industrial

- HT
 - HT-I : Industrial
 - HT-II : Non Industrial

The licensee has factored in the load-relief provided to various categories of consumers to project the restricted sales for months of October to March of FY 2012-13 and for all months in FY 2013-14. R&C/ LR for HT categories vary from 0% to 20% and LR for LT categories range from 0% to 10%. The total sales forecast (restricted) for key categories is as follows:

Consumer Categories	FY 2012-13 (Restricted) (In MU)	FY 2013-14 (Restricted) (In MU)
L.T. Supply	19411.79	23292.01

Number of hours of Supply to LT Agricultural Consumers in FY 2012-13:

The licensee would like to continue with existing 7 hours of power supply to agricultural consumers in FY 2013-14, keeping in view the power supply situation in the state. The deficit situation is expected to continue in FY 2013-14 as per current estimates. However, the licensee may submit a supplementary filing for increase in the number of hours of supply to agricultural consumers to 9 hours during the course of the year, in FY 2013-14, as and when the power situation in the state improves and adequate availability of T&D network for extending agricultural supply by 2 additional hours.

Power Purchase Requirement for FY 2013-14:

The following are the key points considered by the licensee with regard to power purchase requirement by the licensee –

- APGENCO – Damodar Sanjeeviah Thermal Power plant unit – I (800 MW), is expected to be commissioned by Sep 2013 and unit – II (800 MW) expected to be commissioned by Jan -2014.
- APGENCO – Kakatiya Thermal Power Plant Stage II (600 MW) is expected to be commissioned by Feb – 2014.
- APGENCO – Hydel: Lower Jurala plant (240 MW) is expected to be commissioned in FY 2013-14.

- CGS – Vallur Thermal Power Plant (1,500 MW, AP sahre:11.87%) commissioned in December – 2012
- Hinduja National Power Corporation Limited's power plant (500 MW) to be commissioned by Dec – 2013.
- In case of availability projections from NCEs, the licensee has assumed additional average capacity of 350 MW from wind for FY 2013-14 and additional average capacity of 500 MW from Solar from Oct – 2013. Also, 35 MW of additional Solar – PV and 50 MW of Solar Thermal has been assumed to be available from April 2013.
- Medium Term: Capacity of 400 MW from KSK Mahanadi and 150 MW from Corporate Power has been assumed from June – 2013 at the tariffs as derived through competitive bidding process.
- The licensee has considered the availability from all gas-based IPPs in the state based on supply of gas from M/s RIL. The licensee has considered 58% PLF to be available from the old IPPs. The licensee has considered only 2% PLF to be available from the new IPPs (GVK Extension, Gautami, Vemagiri and Konaseema) due to continuous reduction in gas from Reliance KG D6 wells. The licensee shall do a supplementary filing in event of any change in factoring cost due to additional availability from the new IPPs.
- In case of LVS, the licensee has not considered any dispatch from the same in view of the high variable cost (Rs. 11.94/kWh) of the station.
- It has been assumed that 1,200 MU of energy could be procured every month from bilateral/ short term sources at an average price of Rs. 5.11/unit.
- It is expected that the remaining energy deficit would be bridged through usage of R-LNG as and when required from the spare capacity available from existing gas based IPP's and transmission availability.

The overall energy deficit at the state level is shown below:

Particulars	2013-14
Energy Requirement (MU)	106,061
Energy Availability from Long term & Medium Term sources (MU)	83,774
Deficit (-)	22,287
Bilateral Purchases	13,753

Particulars	2013-14
RLNG	6,008
Load Restrictions	2,525

- Variable costs for APGENCO – Thermal and CGS – A 10% escalation over actual variable costs during H1 2012 has been assumed for APGENCO – Thermal and CGS stations
- Fixed costs have been considered as approved by the commission.
- The fixed and variable costs for Hinduja National Power Corporation Limited's power plant have been assumed to be similar to NTPC Simhadri plant.
- The average PP cost at state level is projected to be at Rs. 4.07/unit for FY 2013-14 as against Rs. 3.10/unit for FY 2012-13 as approved by Hon'ble Commission. This indicates an 32% increase over current year mainly due to reduction in availability from gas based IPP's, lower hydel availability, increased dependence on imported coal and higher quantum of power purchase from bilateral sources and RLNG.
- The estimated revenue gap for the licensee for FY 2013-14 is as follows:

Particulars	2013-14
Aggregate Revenue Requirement (Rs. Crs.)	20714.87
Total Revenue	14524.27
Revenue from Current Tariffs (Net of incentives) (Rs. Crs.)	
Non - Tariff Income (Rs. Crs.)	40.89
Revenue from Inter State and D-D Sales (Rs. Crs.)	
Revenue Deficit (-) / Surplus (+) at Current Tariffs (Rs. Crs.)	(6149.71)
Revenue changed through proposed tariff	5661.56
Net Deficit / Surplus (Rs. Crs.)	(488.15)

But, the National Tariff Policy states that the Cross Subsidy should be determined based on Avoided Cost Methodology. In view of this, the licensee would like to file a proposal for determination of cross-subsidy surcharge for Open Access transactions along with this ARR filing for FY 2013-14. It may be noted that the licensee has adopted the methodology stated in the National Tariff Policy for determination of the cross-subsidy surcharge.

1. Introduction

1.1 Filings based on Multi-Year Tariff (MYT) Principles

The Andhra Pradesh Electricity Regulatory Commission framed the “Terms and Conditions for determination of Tariff for Wheeling and retail supply of electricity” - Regulation 4 of 2005 (“Regulation”), which lays the principles for determination of Aggregate Revenue Requirement (ARR) for a) Distribution Business and b) Retail Supply Business of the licensees. The ARR so determined for each of the businesses will form the basis for fixation of wheeling tariff / charges and charges for retail sale of electricity.

In the Regulation, the Commission has also laid down the procedures for filing under multi-year tariff principles. The current filing pertains to the second Control Period. The Commission has specified in Para 6.2 of the Regulation the following procedure for ARR filing for the distribution and retail supply business: *“The ARR filing for the Distribution business shall be for the entire Control Period. For the Retail Supply business the ARR filing will be on annual basis for the first Control Period*”

The current filing follows the principles laid down under this Regulation for determination of i) the ARR for the retail supply business for the year 2013-14, which is the fifth year of the second Control Period.

1.2 Filing Contents

The filing is structured in the following way:

Section 2 provides analysis of expected performance for current year for Retail supply Business comprising

- Operating Performance
- Financial Performance and

A brief analysis of the financial and operational performance of the licensee during the previous year (2011-12) and the current year (2012-13) is given.

Section 3 provides the ARR for Retail Supply Business for fifth year of the second Control Period and the basis of projections of the expense and revenue items comprising:

Expenditure Projections

- Power Purchase Cost
 - o Power Purchase and Procurement Cost
- Transmission and PGCIL Charges

- SLDC Charges
- Distribution Cost
- Interest on Consumer Security Deposits
- Supply Margin
- Other Costs
- Aggregate Revenue Requirement for Retail Supply Business

Revenue Projections

- Sales Forecast
- Revenue from Current Tariffs
- Non-tariff Income at Current Charges
- Revenue at Current Tariffs and Charges

Revenue Gap

- Revenue Deficit / Surplus at Current Tariff and Charges
- Proposals to handle the Deficit / Surplus

The sales forecast is used to determine the revenue from tariff from retail sale of electricity for the fifth year of the second control period and the energy input required for meeting the demand. The power procurement plan is based on the availability of the generation sources during the ensuing year, the cost (fixed, variable and others) and the merit order dispatch of various sources to meet the demand expected during various months.

Section 4 provides the Tariff proposals comprising of Tariffs for ensuing year.

2. Analysis of expected performance for Current Year for Retail Supply Business

2.1 Introduction

This chapter analyses the performance of the licensee during the Current Year as compared to the previous year & also with the Tariff Order-2012-13. Only the key operating and financial parameters have been considered for this analysis.

2.2 Operating Performance

2.2.1 Energy Balance

As seen from the above table, the actual losses for the FY 2011-12 are 18.13% compared to previous year loss of 17.34%. However it is expected to reduce the losses with the implementation of the following measures.

- i) Strict implementation of Restriction and Control measures to ensure the assured number of hours of supply to agricultural sector.
- ii) Reduction of both technical and commercial losses by vigorously conducting 11 KV feeder wise energy audits around 1768 Nos. feeders in the company.
- iii) During the year 2010-11, only 1644 Nos. 11 KV Town & MHQ feeders were considered for energy audit where as during the year 2011-12, 1768 Nos. feeders are available in EAUDIT for which energy audit is done on regular basis at corporate office level.
- iv) 108 Nos. additional 11 KV 2 MVAR capacitor banks proposed during the year 2010-11 and completed.

For the FY 2011-12, 95 (52 Nos. 2 MVAR capacitor banks & 43 Nos. 1MVAR capacitor banks) additional 11 KV capacitor banks were proposed and 25 are charged and balance work under progress.

- v) For the year 2011-12, 67 Nos. additional 33/11 KV sub-stations were charged and For the year 2012-13, 70Nos. additional 33/11 KV sub-stations are proposed out of this 7 Nos. were already charged to reduce over loaded 33 KV & 11 KV lines and to maintain good voltage profiles up to the consumers end.

2.2.1.2 Metered Sales –

As can be seen from the table above, in 2011-12, the percentage of metered sales is lower than the Tariff Order level by 7.3 %. The reduction is accounted due to the following reasons:

- Load curtailment about 1696 MU during FY 2011-12.
- Increase in the Agriculture consumption by 1400 MU (i.e. 3.35%) over the Tariff Order approved value.

In 2012-13, the metered sales are expected to decline by about 803 MU over 2011-12 levels and lower by 17.36% over the Tariff Order level (T.O. 2012-13) . This is due to implementation of R&C measures as per APERC guidelines during the year.

2.2.1.3 Agricultural Sales –

In the previous year 2011-12 the actual Agriculture Consumption is 8740.15 MU as

against the approved APERC target of 7340 MU. There is an increase of 1400.15 MU with respect to the given APERC target. In the current year 2012-13, 9173.10 MU is estimated agricultural consumption. The licensee assumes that the monsoon for the coming year (2012-13) will be at normal level and hence believes that the Agriculture Sales for 2013-14 will be nearer to 9632 MU.

2.3 Financial Performance

The following table provides an overview of APCPDCL's financial performance for the current year and compares it with the APERC orders:

The paragraphs below explain the deviations in key elements:

2.3.1.1 *Revenues from sale of electricity:*

The revenue for FY 2012-13 is expected to be Rs 11005.61 Crores as against the Tariff Order level of Rs. 13335.29 Crores.

For the key categories, the licensee has estimated the revenue as below:

Total	10292.74	9561.94	13264.90	11005.60

The revenue from sale of power as approved by APERC in the tariff order 2011-12 is Rs. 10292 crores including non-tariff income. The actual revenue during FY 2011-12 is lower by Rs 730 crores. The main reasons for such shortfall in the revenue are due to high load reliefs. During FY 2012-13, the estimated revenue from sale of power (inclusive of Non-tariff income) is lower by Rs.2259 crores over Tariff order figures due to imposition of R&C measures.

2.3.1.2 *Power Purchase Cost:*

For 2012-13, the revised estimates of power purchase costs are higher than the approved costs by Rs. 734.28 Cr due to fixation of stiff distribution loss targets and also increase in agricultural sales by

1099.4 MU over the Tariff Order level. This is due to the increase in coal price and use of imported coal which has contributed for the weighted average power purchase cost to increase by 52 paise / kWh over the Tariff Order approved value of Rs. 3.08 / kWh.

2.3.1.3 *O&M Cost:*

For 2012-13, the projected O&M expenses are Rs. 950.21 crores (gross), which is approved in the Distribution MYT order second control period (2009-10 to 2013-14).

3. POWER PURCHASE COST FOR CURRENT YEAR (FY 2012-13) SECOND HALF AND ENSUING YEAR (FY 2013 - 14)

3.1 BASIS OF ESTIMATION OF QUANTITY AND COST OF POWER PURCHASE

This section discusses the methodology and assumptions considered for estimating the quantum and corresponding cost of power purchase of the Licensee for the second half of the Financial Year ending March 31, 2013 and for the Financial Year ending March 31, 2014.

With the implementation of Multi-Buyer Model (MBM) in the state from June 9, 2005, each DISCOM has been allocated a certain share of the generating stations contracted by APTRANSCO.

PP allocation

- 20% of APGenco Thermal will be allocated based on the proportion of agriculture sales in each DISCOM for FY 2013 - 14.
- Non-conventional Energy sources have been allocated to the DISCOMs based on their geographical presence/location.
- The two mini-power plants LVS and Srivaths have been allocated to APEPDCL.
- RLNG has been allocated to each DISCOM based on the deficits in each DISCOM after tying up all the purchases from long term, medium term sources and bilateral purchases.
- The allocation percentages for different DISCOMs of 80% APGENCO and all the other sources is being done as per the final transfer scheme are as follows:

S. No.	Name of the Distribution Company	Allocation Percentage
1	APEPDCL	15.80 %
2	APSPDCL	22.27 %
3	APCPDCL	46.06 %
4	APNPDCL	15.87 %

In case of deficit of energy, the external purchases have also been allocated based on the above allocation percentages.

The remaining deficits in FY 2013-14 (for any Discom) would be bridged through usage of R-LNG from existing idle capacity available from IPP's (to the extent of idle capacity available and transmission corridor).

In the following paragraphs, the capacities and availabilities of all the generating sources have been described. The actual energy availability in MU for each DISCOM has been projected based on the above allocation principles.

3.2 INSTALLED CAPACITY OF MAJOR GENERATING STATIONS:

3.2.1 APGENCO

The table below shows the projected capacities of the Thermal and Hydel generating stations of APGENCO including the share in the interstate projects. The DISCOMs purchase the entire generation of APGENCO under the terms of the PPAs with the generator.

3.2.3 INDEPENDENT POWER PRODUCERS (IPPs)

The following IPPs are under commercial operations in the State:

- 216.82 MW gas-based plant at Jegurupadu by GVK Industries (“GVK”);

- 208.31 MW gas-based plant at Kakinada by Spectrum Power Generation Ltd.,
- 361.92 MW gas-based plant at Vijayawada by Lanco Kondapalli Power Ltd (“Lanco Kondapalli”).
- 220.00 MW gas based plant at Samalkota, East Godavari District by M/s. Reliance Power Ltd. (formerly M/s. BSES).

The Plant Load Factor (PLF) of above four IPPs has been considered as per the present availability of Gas for the second half of FY 13.

In addition, the energy availability projections from IPP's which have commissioned in XIth plan for the second half of FY 12-13 and for the FY 13- 14 are shown below

Project Name	Capacity (MW)
GVK Extension	220.00
Vemagiri	370.00
Gautami	464.00
Konaseema	444.08

The availability from these new IPPs (with a total capacity of 1498 MW) is subject to natural gas supply from M/s RIL. Considering the trend in reduction of KG D6 wells, the projected availability is limited almost negligible for the ensuing year FY 2013-14.

The new IPP's viz., 220 MW GVK extension, 370 MW GMR Vemagiri, 464 MW Gowthami and 444 MW Konaseema are currently operating at around very low PLF's due to reduced RIL D-6 gas supplies and there is an idle capacity from these projects. RLNG would be utilized in these idle capacities to meet the energy deficits in the state.

3.2.4 AP Gas Power Corporation Ltd (“APGPCL”): Joint Sector

APGPCL is a joint sector gas-based power project. The allocation of power from this project is in proportion to the equity share capital of participating industries. The total installed capacity of the project along with the DISCOMs share is as given below:

Source	Installed Capacity (MW)	APDISCOMs Share (MW)	APDISCOMs Share (%)
Stage I	100	16.00	16.00
Stage II	172	42.80	24.88
Total	272	58.80	21.62

3.2.5 Non-Conventional Energy (NCE) Sources

The installed capacities of NCE projects in the state projected for FY 13 and FY 14 are as follows:

Type of Project	FY 13 (MW)	FY 14 (MW)
Bio Mass Power Projects	194.75	200.0
Bagasse Cogeneration Projects.	190.70	190.70
Wind Power Projects	380.00	730.0
Mini Hydel Power Projects	51.05	51.05
Industrial Waste Based Power Projects	29.16	29.16
Municipal Waste Based Power Projects	12.74	12.74
NCL Energy Ltd.	8.25	8.25
Solar Power Projects	23.75	608.75
TOTAL	890.4	1830.65

3.2.6 Mini-Power Plants

APTRANSCO had entered into a Power Purchase Agreement with LVS (36.8 MW) on 3rd January, 2009 for purchase of power in compliance with the Orders issued by Hon'ble Supreme Court and had entered into another Power Purchase Agreement with Srivathsa (17.20 MW) power plant. These projects have been allocated completely to APEPDCL.

3.2.7 HNPCL

GoAP agrees to facilitate the implementation of the power project to achieve the timeline for schedule commissioning. The GoAP has also decided to direct the APDISCOMs as the successor entities of erstwhile APSEB to enter into a continuation agreement to the PPA of 1998 with M/s. HNPCL. It has been assumed that the power plant would be commissioned in FY 2013-14.

3.3.5.2 Non-Conventional Energy (NCE) Sources

The energy availability projections from NCE – Municipal waste of energy, NCE – Mini Hydel, NCE – NCL Energy for FY 13 H2 and FY 14 is based on actual availability from these sources during FY

H1 2012- 13.

The energy availability for biomass based plants has been projected by considering 80% PLF.

Energy availability from existing wind power stations has been considered at 22% PLF. The Hon'ble commission has approved the tariff of Rs. 4.70/unit for upcoming wind power generating stations. Hence, the licensees have assumed that 350 MW at 22% PLF of wind power based capacity would be installed in the entire state starting from April – 2013.

Energy availability from existing solar PV and solar thermal power stations has been considered at 19% PLF and 23% PLF respectively. It is expected that 35 MW of solar PV and 50 MW of solar thermal power would be added during FY 2013-14 from JNNSM. As per the JNNSM policy, bundled power of the same capacity from CGS stations which is almost 4 times of the energy equivalent shall be made available to the state.

In addition, with the spirit to meet the RPPO as fixed by the Hon'ble Commission, APTRANSCO has notified a tender to procure 1000 MW in the entire state. in light of the above, it has been assumed that 500 MW of solar power plants would be available from October – 2013.

3.3.6 Medium Term Purchases

The licensees have signed PPA's with KSK Mahanadi and Corporate Power for supply of power through medium term basis starting from June – 2013 for a period of 4 years. It is estimated that 2,220 MU and 832 MU is available from KSK Mahanadi and Corporate Power respectively

3.3.7 Hinduja National Power Corporation Limited

It has been projected that HNPCL of 500 MW would be available from Dec-2013 and the energy availability projected from this plant is around 1,132 MU.

3.3.8 Bilateral / Short Term Purchases

The Licensee proposes to procure power from bilateral / short term sources to bridge the energy deficit. It has been assumed that a maximum of 1,200 MU/month would be available for FY 2013-14. A total of 13,753 MU is being projected for the year FY 2013-14.

3.3.9 RLNG Based Generation

The new IPP's viz., 220 MW GVK extension, 370 MW GMR Vemagiri, 464 MW Gowthami and 444 MW Konaseema are currently operating at around very low PLF's due to reduced RIL D-6 gas supplies and there is an idle capacity from these projects. RLNG would be utilized in these idle capacities to meet the energy deficits in the state. It is estimated that 6,008 MU would be available through utilization of RLNG in the existing IPP's. The allocation to each DISCOM has been made based on the proportion of deficits that exist after allocation of all the above mentioned sources.

CERC had issued final orders towards fixed charges payable by SR Beneficiaries for the Control Period 2009-14 in case of Simhadri Stage-II. The incentives payable have been factored into the fixed charges. In the final orders of CERC, the income tax was grossed up in ROE component and hence, the fixed charges determined for FY 13 H2 and FY 14 are inclusive of income tax. As per the Central Electricity Regulatory Commission (Terms and Conditions of Tariff) Regulations, 2009, incentives are also part of fixed charges which are to be computed in every month based on the formulae provided in the Regulations. Based on the availability projections, the fixed charges along with payable incentives are mentioned in the ARR for FY 13 H2 and FY 14 in case of Simhadri Stage-II. Both the units were under operation in case of Simhadri Stage-II. The variable charges for FY 13 H2 and FY 14 are projected based on 10% escalation on H1 FY 2012-13

3.4.2.9 Vallur Thermal JV Power Project (NTPC & TANGEDCO):

Ministry of Power, GOI had allocated firm share of 11.87% from total capacity of 1500MWs to AP. Presently, unit 1 is likely to be pronounced COD very soon as per the intimation of NTPC to SRPC. NTECL had made filings before CERC for determination of tariff to this JV Project and orders are yet to be issued by CERC. The payable fixed charges are computed as per the filings of NTEC before Hon’ble CERC. The variable charges in every month was computed by taking into variable cost per

unit as projected in the computation of working capital element by NTECL ie., as per the filings before CERC.

3.4.2.10 *Bundled Power from NTPC(ER) Stations under JNNSM:*

Presently, NVVNL has been issuing the availability declarations to APDISCOMs from NTPC(ER) stations to AP against commissioning of solar power in AP under JNNSM Policy. The available energy was considered based on the solar power projections for FY 2013-14.

3.4.3 APGPCL

The power purchase cost incurred by APDISCOMs for procurement from APGPCL for FY 14 is as per the projections given by APGPCL:

The calculations were done on the basis of availability of 0.65 MSCMD of Natural Gas with the usage of part load i.e., about 125 MW (out of 272 MW). As a result, about 150 MW was kept as idle for want of Natural Gas. Consequently, the fixed cost has gone up steeply.

Cost components of APGPCL for FY 13 H2 and FY14		
<u>Stage-I</u>	FY 13 H2	FY 14
Fixed cost (Rs. Crs.)	3.90	4.14
Variable cost (Rs. / kWh)	2.03	2.03
<u>Stage -II</u>		
Fixed cost (Rs. Crs.)	4.20	14.07
Variable cost (Rs. / kWh)	1.93	1.93

3.4.4 IPPs

3.4.4.1 *GVK JEGURUPADU POWER PROJECT*

The fixed cost is fully recoverable at 68.50 % PLF. The variable charge of Rs 2.19 / kWh has been considered based on gas supplies by GAIL from ONGC, Ravva Satellite Fields and Reliance Gas.

The capital cost of this plant is Rs. 816 Crs. The fixed cost is Rs. 106.15 Crs per annum for FY 13 and Rs.109.04 Crs for FY 14. The fixed cost includes foreign exchange variations payable by APDISCOMs to the generator as per the provisions of Power Purchase Agreement. The actual fixed cost as settled by the licensee may be different from the estimates as presented above on account of the monthly Foreign Exchange Rate Variation (FERV). The licensee submits to the Hon'ble Commission to allow the licensee to subsequently claim the change in fixed cost on account of FERV.

Deemed / Notional generation claims will be payable to the generator up to 85 % PLF as per the incentive formulae provided in the PPA.

Computation of incentive has been carried out based on the formula provided in the PPA. As there is gas deficit the expected PLF for FY 13 may be of 68.50%. Hence incentive may not be applicable for the FY 13.

$$\text{Incentive payment} = \text{Equity} \times (\text{PLF} - 68.50) \times 0.00525;$$

$$\text{Equity} = \text{Rs. } 244.80 \text{ Crs};$$

Projected incentive for FY 13 is Rs. 0.00 Crs and for FY 14 is Rs. 0.00 Crs (as there is deficit of Gas) there would be no additional units in excess of actual generation.

3.4.4.2 SPECTRUM

The fixed cost is fully recoverable at 68.50 % PLF. The variable charge of Rs.2.19/ kWh has been considered based on gas supplies by GAIL from ONGC, Ravva Satellite Fields and Reliance Gas.

The fixed cost of Rs. 97.53 Crs has been adopted for FY 13 and Rs.99.8 Crs for FY 14. The fixed cost is inclusive of foreign exchange variations payable by APDISCOMs to the generator as per the provisions of Power Purchase Agreement.

The actual fixed cost as settled by the licensee may be different from the estimates as presented above on account of the monthly Foreign Exchange Rate Variation (FERV). The licensee submits to the Hon'ble Commission to allow the licensee to subsequently claim the change in fixed cost on account of FERV.

Deemed / Notional generation claims will be payable to the generator up to 85% PLF as per the incentive formulae provided in the PPA.

Computation of incentive has been carried out based on the formula provided in the PPA. As there is deficit of Gas the expected PLF for FY 13 may be of 68.50%. Hence incentive may not be applicable for the FY 13.

$$\text{Incentive payment} = \text{Equity} \times (\text{PLF} - 68.50) \times 0.004 \text{ (if PLF} > 68.50 < 80.50\text{);}$$

$$\text{Incentive payment} = \text{Equity} \times (\text{PLF} - 68.50) \times 0.005 \text{ (if PLF} > 80.50 < 85.50\text{);}$$

$$\text{Incentive payment} = \text{Equity} \times (\text{PLF} - 68.50) \times 0.006 \text{ (if PLF} > 85.50\text{);}$$

$$\text{Equity} = \text{Rs. } 117.92 \text{ Crs};$$

Projected incentive for FY 13 is Nil and for FY 14 is Nil (as there is gas deficit) there would be no additional units in excess of actual generation.

3.4.4.3 LANCO KONDAPALLI

The fixed charges are fully recoverable at 80% PLF. The variable charge of Rs 2.27 / kWh has been considered based on gas supplies by GAIL from ONGC, Ravva Satellite Fields & RIL. The exchange rate considered for estimation of fixed cost is Rs.55/USD.

Estimated fixed cost for FY 13: Rs. 292 Crs.

Estimated fixed cost for FY 14: Rs. 121 Crs.

As per the existing PPA of Lanco Kondapalli with APDiscoms, the FDSC component of the fixed charge will not be payable by APDiscoms after completion of 10 years from the date of commencement of supply of power. This 10 year duration will be complete by December 2012. Hence, FDSC component will not be payable from Jan 2013 to March 2013. Hence the fixed cost for FY 14 has decreased compared to the fixed cost for FY 13.

Incentive: In case the plant achieves a PLF (I) greater than 80% for a tariff year, then the Board shall pay to the generator incentive (as a percentage of the other fixed charges) for any additional unit generated beyond the actual generation in excess of a PLF (I) of 80%. The incentive structure is as shown below:

PLF (I) %	Incentive (%)
Up to 80 %	Nil
Above 80 % and up to 85 %	2 % for every 1 % increase in PLF(I) (i.e. for a PLF(I) of 85 %, the incentive will be 10 % of the Other Fixed Charge)
Above 85 % and up to 90 %	3 % for every 1 % increase in PLF(I) (i.e. for a PLF(I) of 90 %, the Incentive will be 10 % + 15 % = 25 % of the Other Fixed Charge)
Above 90 %	Same as for 90% i.e. 25% of the Other Fixed Charge.

Projected incentive for FY 13 is Rs. 0.00 Crs and for FY 14 is Rs. 0.00 Crs as there would be no additional units in excess of actual generation.

3.4.4.4 RELIANCE INFRASTRUCTURE LTD. (BSES)

The fixed charge is fully recoverable at 85 % PLF. The variable charge of Rs.2.26 / kWh has been considered based on gas supplies by GAIL from ONGC, Ravva Satellite Fields & RIL. The exchange rate considered for estimation of fixed cost is Rs. 55/USD. Based on the formula provided in the PPA, the fixed cost payable to this generator is Rs. 168 Crs for FY 13 and for FY 14 is Rs.155 Crs.

Incentives: In case the plant achieves a PLF (I) greater than 85% for a tariff year, then the incentive (as a percentage of the other fixed charges) payable for any additional unit of actual generation in excess of a PLF (I) of 85 %. The incentive structure is as shown below:

PLF (I) %	Incentive (%)
Up to 80 %	Nil
Above 80 % and up to 85 %	At “Committed Incentive Charge”
Above 85 % and up to 90 %	2 % for every 1 % increase in PLF(I) (i.e. for a PLF(I) of 90 %, the Incentive will be 10 % of the Other Fixed Charge)
Above 90 %	Same as for 90% i.e. 10 % of the Other Fixed Charge.

Projected incentive for FY 13 and FY 14 is Rs. 0.00 Crs and Rs. 0.00 Crs respectively as there would be no additional units in excess of actual generation. The licensee shall not bear the tax on incentives payable to the generator.

3.4.5 New IPPs

The availability of power from generating stations of GVK Extension, Vemagiri, Gautami and Konaseema for the FY 12-13 and FY 13-14 have been projected based on the gas reduction trends for the period from Apr – Sep'12 @ 17%(avg) per month. The fixed cost component for each of these stations is as mentioned in the table below:

New IPPs	COD of Projects	FY 13 (Rs. Crs.)	FY 14 (Rs. Crs.)	Variable Cost (Rs./kWh)
GVK Extension Project	14/04/2009	52.48	3.33	2.10
Vemagiri Power Generation Ltd	16/09/2006	83.76	7.51	2.10
Gautami Power Ltd	05/06/2009	92.02	9.08	2.10
Konaseema EPS Oakwell Power Ltd.	30/06/2010	87.23	8.98	2.10

The above fixed cost is worked out based on the projected PLFs of each IPP for the respective FY and also based on the following projections.

- 1 US \$ / Rs. (Currency Conversion Rate) = 55.00 .
- 2 Availability = as per gas reduction trends, considered monthly reduction of 17%(avg)
- 3 Per unit fixed cost of GVK as per bill= Rs. 1.00 & all other IPPs = Rs. 1.03

The availability of generation from new IPPs is works out duly considering the period of the plant maintenance works as projected by IPP:

1. The availability of power generation from GVK Extn, Vemagiri, Gautami & Konaseema indicated above is subject to availability of Natural Gas from Reliance D-6 fields.
2. Gautami proposed HRSG annual inspection and GT-11 Major inspection during July'13.

3. Vemagiri proposed to shut down for 3 days during Jan'13, Apr'13, Oct'13 & Jan'14.
- 4 GVK Extn proposed shutdown for 36 days for Gas Turbine Scheduled major inspection during Apr'13-May'13.
- 5 Konaseema proposed plant outage for 15 days during Sep'13.

3.4.6 MINI POWER PLANTS

3.4.6.1 LVS POWER LTD (36.8 MW)

The fixed charges are fully recoverable at 80% PLF. The plant has been operational from 15.01.2009 onwards, in compliance with the Hon'ble Supreme Court orders dt.28.11.2008. The variable cost for this station has been assumed as Rs. 11.33/ kWh. The fixed cost payable by APDISCOMs to this generator is Rs. 38.Crs for FY 13 and Rs.39 Crs for FY 14.

Incentive: In case the project achieves a PLF (I) greater than 80 % in a tariff year, then APEPDCL shall pay to the generator an incentive of Rs. 0.05 / kWh for any additional unit of actual generation of energy at the interconnection point in excess of a PLF (I) of 85 %. The projected incentives for both FY 13 and FY 14 are Rs. 0.00 Crs each.

3.4.6.2 SRIVATHSA POWER PROJECTS LTD (17.202 MW)

The recovery of fixed charges is limited to the delivery of 110 MU energy units. The variable cost for this station has been considered as Rs.2.51 / kWh, based on gas supplies by GAIL from ONGC and Ravva Satellite Fields. The fixed cost payable is Rs. 4.027 Crs for FY 13 and Rs. 4.073 Crs for FY 14.

Incentives: In case the project achieves delivered energy in excess of 110 MU in a tariff year, the APDISCOMs shall pay to the generator, an incentive of Rs.0.05 (Rupees Zero and Five Paise only) / kWh for each additional unit of actual delivery of energy at the Interconnection Point.

3.4.7 NON CONVENTIONAL ENERGY (NCE) SOURCES:

The Commission passed orders on 20.03.2004, fixing power purchase price applicable for NCE Projects from 01.04.2004 to 31.03.2009. The NCE Project Developers filed cases before the Appellate Tribunal against the APERC orders. The Appellate tribunal set aside APERC Orders dated. 20.03.2004. APTRANSCO and APDISCOMs filed Appeals before Supreme Court against ATE Orders. The Hon'ble Supreme Court passed Orders dated. 08.07.2010 setting aside ATE Orders. The Supreme Court remanded the matter to APERC with a direction to hear NCE Project Developers afresh and determine /fix tariff/power purchase price. APERC has initiated the public hearing in this matter from 28.09.2010 and passed three divergent orders vide its order dt:12.09.2011. The APERC orders are challenged before Appellate Tribunal for Electricity by NCE developers & APDISCOMs. The Tribunal has already taken up the case and yet to dispose the same.

APERC passed orders on 31.3.2009 fixing variable cost applicable to existing Biomass, Bagasse

& Industrial waste projects for the period from 1.4.2009 to 31.3.2014. The Commission also fixed single part tariff for existing Wind and Municipal waste projects for the period from 1.4.2009 to 31.3.2014. Further APERC issued orders dt:15.11.2012 duly fixing new tariff for upcoming wind power projects. The DISCOMs have considered the Hon'ble Commission orders in factoring the costs.

Rs. 4.70/unit has been considered for upcoming wind power projects and Rs. 5.50/unit has been considered for solar power projects.

The total weighted cost of each of the NCEs is shown in the table below:

Project Type	Weighted average Variable Cost Considered for FY 14 (Rs. / kWh)
NCE – Bio-mass	4.13
NCE – Bagasse	3.31
NCE – Municipal Waste to Energy	4.24
NCE – Industrial Waste based power project	4.65
NCE – Wind Power	4.55
NCE – Mini Hydel	2.34
NCE – NCL Energy Ltd.	1.78
NCE – Solar Power	5.50

3.4.8 Bilateral Purchases

Month-wise shortfall has been estimated based on the availability and requirement. A part of this deficit would be met from external sources such as power traders and power exchange. The estimated purchases from such external sources are estimated to be 12,757 MU for FY 13 and 13,753 MU for FY 14. Based on the information available with the licensees on the possible market prices for such purchases, the licensees have adopted the following landed cost of power purchase for external short term purchases. The licensees have considered Rs. 5.11/unit for bilateral purchases, which is the actual price of bilateral purchases during the period H1 2012-13.

3.4.9 HNPCL

The licensees have considered the fixed and variable costs for the upcoming HNPCL power plant to be same as the costs for NTPC Simhadri Stage II.

3.4.10 Medium Term

The licensees have considered the costs as per the prices quoted by the bidders in the medium term bidding process.

3.4.11 RLNG

The licensees have considered the fixed costs to be similar to the fixed costs of New IPP's (Rs. 1.03/unit) and variable costs of Rs. 8.97/unit.

3.4.12 D-D Purchases

Month-wise availability of each Discom has been calculated based on PPA allocation and the requirement of each Discom at APTRANSCO periphery has been calculated, by grossing up the sales with losses. The D-D purchases / sales for each Discom have been estimated after taking into account the respective allocations to each Discom as per the Final Transfer Scheme. The D-D pool price has been considered at Rs. 5.11/unit (Price of energy from bilateral purchases).

3.5 ENERGY REQUIREMENT

Based on the availability shown above and the energy requirement from all the DISCOMs, the actual energy to be purchased Discom-wise has been projected as follows:

DISCOMS	FY 13 H2	FY 14
	MU	MU
EPDCL	6,477	17,097
SPDCL	9,875	24,937
CPDCL	18,788	45,948
NPDCL	7,378	15,553
Total	42,518	103,535

The above energy requirement of the licensees has been arrived at by grossing up the sales of the licensee sales with appropriate transmission and distribution losses. The external loss on the power purchased from CGS only has also been factored in the above energy requirement.

3.6 SUMMARY OF POWER PURCHASE FOR CURRENT YEAR FY 13 H2 AND ENSUING YEAR - FY 14

As per clause 7 of the Regulation No. 6 of 2004 “*The licensee shall pay interest on security deposit of a consumer, at the Bank Rate notified by Reserve Bank of India provided that the Commission may specify a higher rate of interest from time to time by notification in Official Gazette. The interest accruing to the credit of the consumer shall be adjusted annually against the amounts outstanding from the consumer to the Licensee as on 1st May of every year and the amounts becoming due from the consumer to the Licensee immediately thereafter*”

The Bank rate notified by the Reserve Bank of India till 13-02-2012 is 6.00% p.a. During the period from 13-02-2012 to 16-04-2012 the rate has been enhanced to 9.50% p.a. and from 17-04-2012 the Bank rate is fixed at 9.00% p.a.

During the ARR filings of FY 2011-12, the licensee has filed interest on Consumer security deposit @ 6 % p.a (which is the prevailing RBI Bank rate at the time of filing) and the Hon’ble Commission has approved the same. Based on the tariff order, the licensee has paid 6% p.a. interest for FY 2011-12. But few consumers have requested the licensee to pay the rate of interest 9.5% p.a . from 14-02-2012 to 31-03-2012 as against the approved rate of interest of 6% p.a. The Hon’ble High court has passed an order in favour of consumers and ordered the licensee to pay the rate of interest @9.5% p.a. from 14-02-2012 onwards.

The Regulation has not clearly stipulated whether the interest shall be calculated daily/monthly/yearly basis. There is an ambiguity in considering the rate of interest, if the RBI bank rate is being changed more than once in the financial year.

The Hon’ble Commision while approving tariff order for FY 2012-13 has also approved the interest on consumer security deposit at 6% p.a.

As the rates are being volatile in nature during the past months, the licensee requests the Hon’ble Commission to clarify on the rate of interest that has to be paid to the consumers on their security deposits when the rates are being unstable in nature.

The licensee has adopted 9% p.a. as interest rate which is prevailing bank rate of RBI on security deposit for FY 2012-13 and FY 2013-14 in these filings.

3.9.2 Trend Method

This method is a non-causal model of demand forecasting which assumes that the underlying factors, which drive the demand for electricity, are expected to follow the same trend as in the past and hence the forecast for electricity is also based on the assumption that the past trend in consumption of electricity will continue in the future. The strength of this method, when used with balanced judgment, lies in its ability to reflect recent changes and therefore is probably best suited for a short-term projection as used for the ARR/ Tariff filing. However, the trend-based approach has to be adjusted for judgment on the characteristics of the specific consumer groups/ categories. For example, while this method may provide a better estimate of consumption by the domestic and commercial categories of consumers, it may not be very suitable for the industrial category because of the high dependence of demand on the end-use and also on the macroeconomic variables.

In any case, the forecasts arrived at by using the trend method need to be modified for impact of any other considerations like increasing commercialization/ development in certain districts/ regions to incorporate the impact of econometric variables and the load reliefs issued in the past. The Licensee has projected the category –wise sales based on the modified trend approach. Sales Forecast for the ensuing year has been developed based primarily on analysis of historic data for the period FY 2007-2008 to H1 of FY 2012-13. The following inputs have been taken to arrive at sales consumption for H2 of FY 2012-13 and FY 2013-14.

- Actual Sales till September 2012 have been taken.
- Category wise Load Relief in MUs for the period from October 2011 to March 2012 are considered for projecting October 2012 to March 2013 sales for FY 2012-13 and October 2011 to September 2012 LR MUs have been considered for projecting the FY 2013-14 unrestricted sales.
- Category wise CAGR (Compounded Annual Growth Rate) trend during the last 5 years, year-on-year growth rates and first half and second half CAGR has been considered for projecting sales for second half of the current year and ensuing year.

The Distribution Licensees had projected Unrestricted Sales for FY 2013-14. With Unrestricted sales projection, the licensees expect that there would not be any load relief for all the categories of consumers. The total Unrestricted Sales projected by all the four licensees for FY 2013-14 is **89,890 MU**. The total Unrestricted Energy requirement after factoring in the voltage level losses is **106,061 MU**. The expected Energy Availability excluding R-LNG based IPP's and Bilateral purchases is **83,774 MU**. Considering the availability of **6,000 MU** from R-LNG based IPP's for FY 2013-14 and maximum availability from Bilateral purchases to the tune of **1200 MU** every month for FY 2013-14, the total Energy availability is **103,535 MU** leading to an Energy deficit of **2,525 MU**. The licensee in light of the expected Energy deficit for FY 2013-14 would have to impose Restriction & Control

(R&C) measures in the form of Load Relief (LR) on the following consumer categories for FY 2013-14.

- LT
 - LT-I : Domestic
 - LT-II : Non Domestic/Commercial
 - LT-III : Industrial
- HT
 - HT-I : Industrial
 - HT-II : Non Industrial

The LR's to be given for the LT consumer categories in a month are expected to range from 0 to 10% of the unrestricted demand for that month and the LR's to be given for the HT consumer categories in a month are expected to range from 0 to 20% of the unrestricted demand for that month.

The total Load Restrictions (LR) to be given for LT and HT consumers at the state level for FY 2013-14 is projected to be **2,525 MU**.

The below table lists down the % of LR's which are to be given to different consumer categories at a state level. The licensee proposes to impose the same % LR's on the mentioned consumer categories in its jurisdiction.

Category	Apr-13	May-13	Jun-13	Jul-13	Aug-13	Sep-13	Oct-13	Nov-13	Dec-13	Jan-14	Feb-14	Mar-14

HT-I HT-II	18%	7%	0%	0%	12%	0%	19%	3%	0%	0%	0%	11%

The projected LR's for FY 2013-14 at the DISCOM level for different consumer categories is given below.

Category	LR (MU)
LT-I: Domestic	166
LT-II: Non-Domestic/Commercial	50
LT-III: Industrial	24
HT-I: General (Industrial)	723
HT-II: Others (Commercial)	133

The restricted Sales obtained after deducting the LR's from the unrestricted sales of FY 2013-14 is 38551 MU.

The licensee has used the restricted sales for FY 2013-14 for projecting the FY 2013-14 revenues as these figures have been derived considering the realistic Energy Availability projections.

The below sections list down in detail the unrestricted and restricted sales projections for different consumer categories.

Forecasting Sales: LT-I Domestic Category

Based on the past 5 years CAGR and number of services released during the 1st half of the current year, moderated growth rate of 9.23% is considered for projecting second half sales of the current year 2012-13. To this projected sales, load relief MU of 603.50(i.e. LR during October 2011 to March 2012) has been added to arrive at unrestricted demand of supply for FY 2012-13.

Similarly considering CAGR of FY 2012-13 over FY 2007-08, year-on-year growth rates moderated growth rate of 11.31% has been adopted for forecasting sales for ensuing year. The load relief given during the period October 2011 to September 2012 (i.e. 1593.78 MU) has been added to arrive at unrestricted demand of supply for FY 2013-14.

The Actual sales for FY 2010-11, FY 2011-12 and first half (H1) of FY 2012-13 and projected unrestricted sales for H2 of FY 2012-13 & FY 2013-14 are as given below:

Actual (Sales in MU)			Projection (Sales in MU) (Unrestricted)		
2010-11	2011-12	2012-13 H1	2012-13 H2	2012-13 (H1+H2)	2013-14
5539.75	5970.09	3314.62	3648.19	6962.81	8672.58

The projection based on the unrestricted sales has led to a huge demand-supply gap after considering energy availability estimates from all generating stations including bilateral purchases. To meet such gap, the licensee compelled to restrict the sales by imposing load reliefs for FY 2013-14.

For LT categories, depending on the energy availability for each month, load reliefs ranging from 0% to 10% have been considered during all months to arrive at restricted sales for FY 2013-14. Similarly, the second half sales for FY 2012-13 are also restricted.

The restricted sales for H2 of FY 2012-13 & FY 2013-14 are tabulated below:

Projection (Sales in MU) (Restricted)		
2012-13 H2	2012-13 (H1+H2)	2013-14

Forecasting Sales: LT-II Commercial Category

Based on the past 5 years CAGR, a moderated growth rate of 8% is considered for projecting

second half sales of the current year 2012-13. To this projected sales, load relief MU of 193.25 (i.e. LR during October 2011 to March 2012) has been added to arrive at unrestricted demand of supply for FY 2012-13.

Similarly considering CAGR of FY 2012-13 over FY 2007-08, year-on-year growth rates moderated growth rate of 8.28% has been adopted for forecasting sales for ensuing year. The load relief given during the period October 2011 to September 2012 (i.e. 515.46 MU) has been added to arrive at unrestricted demand of supply for FY 2013-14.

The Actual sales for FY 2010-11, FY 2011-12 and first half (H1) of FY 2012-13 and projected unrestricted sales for H2 of FY 2012-13 & FY 2013-14 are as given below:

Actual (Sales in MU)			Projection (Sales in MU) (Unrestricted)		
2010-11	2011-12	2012-13 H1	2012-13 H2	2012-13 (H1+H2)	2013-14
1778.53	1918.80	1023.85	1167.23	2191.07	2678.75

The projection based on the unrestricted sales has led to a huge demand-supply gap after considering energy availability estimates from all generating stations including bilateral purchases. To meet such gap, the licensee compelled to restrict the sales by imposing load reliefs for FY 2013-14.

For LT categories, depending on the energy availability for each month, load reliefs ranging from 0% to 10% have been given during all months to arrive at restricted sales for FY 2013-14. Similarly, the second half sales for FY 2012-13 are also restricted.

The restricted sales for H2 of FY 2012-13 & FY 2013-14 are tabulated below:

Forecasting Sales: LT III – Industrial

Based on the past 5 years CAGR, a moderated growth rate of 0.68% is considered for projecting second half sales of the current year 2012-13. To this projected sales, load relief MU of 121.27 (i.e. LR during October 2011 to March 2012) has been added to arrive at unrestricted demand of supply for FY 2012-13.

Similarly considering CAGR of FY 2012-13 over FY 2007-08 , year-on-year growth rates moderated growth rate of 1.99% has been adopted for forecasting sales for ensuing year. The load relief given during the period October 2011 to September 2012 (i.e. 301.49 MU) has been added to arrive at unrestricted demand of supply for FY 2013-14.

The Actual sales for FY 2010-11,FY 2011-12 and first half (H1) of FY 2012-13 and projected unrestricted sales for H2 of FY 2012-13 & FY 2013-14 are as given below:

Forecasting Sales: LT IV – Cottage Industries

Based on the past 5 years CAGR, a moderated growth rate of 2.58% is considered for projecting second half sales of the current year 2012-13. To this projected sales, load relief MU of 1.06 (i.e. LR during October 2011 to March 2012) has been added to arrive at unrestricted demand of supply for FY 2012-13.

Similarly considering CAGR of FY 2012-13 over FY 2007-08 , year-on-year growth rates moderated growth rate of 3.75% has been adopted for forecasting sales for ensuing year. The load

Forecasting Sales: LT V (Agriculture)

The Licensed area of APCPDCL covers six rural districts excluding Hyderabad district. Farmers in these districts are largely dependent on lifting of ground water for their irrigation needs. The demand has been growing consistently over the past years. Typically two crops are grown in a year and in some areas a third crop is also grown.

In spite of our regular appeals every year to the farmers to go for ID crops and complete by 15th April, farmers are not obliging and they are continuing to raise only paddy in mid summer also. Paddy is the preferred crop in most of the areas resulting in high demand on irrigation.

As per the present year experience the usage of power by for agriculture sector is same as that of H₁ of 2010-11.

Other functions which are contributing to increased drawl of energy is the fact that almost all the farmers are getting their pump sets locally wound which will draw more energy. Also replacing their old pump sets with higher capacity pump sets, whenever water levels deplete.

Measurement of agricultural energy consumption through energy meters installed at L V side of Distribution Transformer:

In accordance with the Directives of Hon'ble Commission, APCPDCL has arranged for the metering of energy on the LV side of Distribution Transformers (DTR) that exclusively feed agricultural loads. A total of 6277 DTRs exclusively feeding agricultural loads were provided with metering on the LV side in 235 Mandals out of 322 Mandals. The methodology followed is as follows:

- a). The connected load under sample DTRs in Mandals is taken from Census 2001 report.
- b). The consumption recorded in the Meter on LV side of sample DTRs in that Mandal is taken and the designated LT line losses (based on the type, configuration, and length of the lines under these DTRs) are deducted to get actual energy consumed by pump sets.
- c). The specific consumption per HP/month for the Mandal is arrived at by dividing (b) with (a).

d). The total connected load (in HP) in the districts is taken from census and total consumption in the districts is arrived by multiplying specific consumption and connected load in HP.

Total No. of Mandals	:	322
No. of Mandals covered with sample metering	:	235
Metered DTRs feeding exclusively agricultural loads	:	6277

The LT line losses are grouped into 9 groups as per APERC Lr. No. APERC/ Secy/F.33/D.No. 4501/01, Dt: 19.09.2001. LT line losses are estimated as follows after due classification of the line under on the following classes:

Sl. No.	Name of the Group	% of Energy loss
1	A	1.06
2	B	2.52
3	C	2.85
4	D	2.25
5	E	2.06
6	F	2.88
7	G	5.42
8	H	5.39

Projection of Agl consumption as per 7 Hrssupply:

The agricultural consumption for 2012-13 is 9173.10 MU considering the consumption of the year 2011-12 and 5% growth. This 5% growth rate depends on new Agl. Services releasing (APCPDCL every year 50,000 No.) on an average load of 5 HP, Which contributes additional consumption added to 476 MU/ Annum. Load growth on existing services 1004861 No. with connected load 5087212 HP as on 31-03-2012. Expected 2% load growth on existing loads due to draughts, water level changes and crop changes results 195.29 MU for extending 7 hours supply for 365 days to agricultural services. Total Agriculture Consumption increments from the previous year around (476+195.29) = **671.29 MU**.

The licensee has assumed 7 hours of supply to agricultural consumers, in its projections, considering the present power supply situation in the state.

Difficulties in the methodology

- Meters fixed to LV DTRs are in open field and most of them are exposed to vagaries of nature. The rectification of defects will take considerable time. Much difficulty is being experienced to maintain minimum 50% of valid DTRs as directed by the APERC.
- As the meters are to be read within a span of 27-33 days, and the readings can be taken only during supply hours i.e., 4 hours during daytime, difficulty is being experienced in getting valid DTR meter readings.
- During implementation of HVDS some of the sample DTRs were removed.
- The total HP is considered for estimation is as per census 2001 and there is lot of variation and connected loads of Agl. newAgl. DTRs included and growth in Agl. loads is not considered in the existing methodology.
- Considering of same sample DTRs since 2001 is also doubtful for arriving correct Agl. Consumption.
- In view of the above, GOAP directed all the DISCOMs to evolve an alternate robust methodology for estimation Agl Consumption.

Robust methodology suggested to facilitate easy verification by third party

- Circle wise capacity wise list of DTRs feeding Agl. loads is to be prepared
- 3000 stratified samples are to be selected from the list of DTRs
- Meters are to be provided to these 3000 sample DTRs
- Per KVA consumption is arrived from the above sample meters consumption
- This specific consumption is extrapolated as per the capacity wise list of DTRs and circle wise Agl. consumption is arrived.

AGL CONSUMPTION ESTIMATION IMPLEMENTATION :

LV side metering for 3000 samples under new methodology is completed and readings are being recorded.

4. Tariff Proposals for Financial Year 2013-14

4.1 Detailed Tariff Proposal for Retail Supply Business for FY 2013-14

In the Tariff Order for FY 2012-13, the average Cost to Serve (CoS) as approved by the Hon'ble Commission for the state was Rs 4.44/Unit. Since then, there has been a significant increase in the average CoS during the year and the licensee expects the trend to continue for the ensuing year. The Licensee estimates the state level CoS for the year FY 2013-14 to be at Rs 5.61/Unit.

The increase in the CoS is due to increase in both the power purchase cost and the network cost. The Power purchase cost as approved by the Hon'ble Commission in FY 2012-13 for the state is Rs 3.10/Unit whereas the licensee estimates the power purchase cost for the ensuing year to be Rs 4.07/Unit. With the current tariffs, the revenue gap is projected to be around Rs. 18,500 Crs at state level

Some of the factors leading to such a rapid increase in power purchase cost are:

1. Lower availability projection from the hydel sources as compared to Tariff Order FY 2012-13 and continues to be lower FY 2013-14.
2. Reduction in availability from the gas based IPP's due to reduction in Reliance KG D6 gas and meeting the shortfall in energy from short term purchases/ R-LNG.
3. Shortfall in energy availability due to the above mentioned points is expected to be met through power purchase from short term sources. The APERC approved power purchase cost from short term sources is Rs. 4.17/Unit whereas the actual power purchase cost from short term sources has gone up to Rs. 5.11/Unit.
4. Realistic projections of variable costs of APGENCO and CGS Thermal stations has been considered by taking into account the quantum of imported coal that is expected to be used in these stations. In recent years, there has been an increase in quantum of imported coal usage due to scarcity in the domestic coal availability.

The licensee would like to mention that the increase in the power purchase cost has already been factored in the form of Fuel Surcharge Adjustment (FSA) for the first quarter of FY 2012-13 to the tune

of Rs. 1.30/Unit.

The projected average Cost of Service (CoS) for the licensee for the ensuing year is Rs 5.37/Unit and the estimated average realization at current tariffs for the licensee is Rs 3.77/Unit. This leaves a gap of Rs. 1.60/Unit. This has resulted in deficit of 6149.71 for APCPDCL. To reduce this revenue gap, the licensee is undertaking several energy conservation and loss reduction activities. But, without realistic revision in tariffs, these steps would fall short in bridging the revenue gap.

The licensee proposes that instead of passing the increase in power purchase cost in the form of FSA, it should reflect appropriately in the tariff structure. Hence the licensee proposes the following tariff revisions for various categories.

Cost to Serve Methodology

The Hon'ble commission has been adopting Embedded Cost of Service method for determining the category wise CoS and Tariff. In determination of category wise Tariff for FY 2013-14, the licensee observed that Cost of Service of a category under existing Embedded CoS method and with $\pm 20\%$ is not commensurate with the proposed tariffs of certain categories. The licensee did not face this issue in the years prior to FY 2010-11 as there were no major tariff revisions proposed by the Licensee.

Hence, for the year 2013-14, the licensee would like to propose tariff increase and humbly request the Hon'ble Commission to adopt average cost of supply as per the NTP while fixation of tariffs for each category.

Clause 8.3.2 of National Tariff Policy states that “*For achieving the objective that the tariff progressively reflects the cost of supply of electricity, the SERC would notify roadmap within six months with a target that latest by the end of year 2010-2011 tariffs are within $\pm 20\%$ of the average cost of supply. The road map would also have intermediate milestones, based on the approach of a gradual reduction in cross subsidy*”

Licensee has put all efforts while proposing tariffs to be within $\pm 20\%$ of the average cost of supply wherever it is possible.

In case, If the Hon'ble Commission determines the tariff based on Category wise CoS, then the

licensee humbly requests the Hon'ble Commission not to determine the tariffs based on “CoS Plus or Minus 20%” limit as the clause 8.3.2 of National Tariff Policy (NTP) as the clause refers to average CoS not category wise CoS.

Gist of Tariff rationalization, Tariff Proposals and Revenue Impact

Distribution Licensee proposes to rationalize the tariff structure and make it simpler to comprehend in place of the existing tariff structure. The existing tariff structure has more than 100 line items (including sub-Categories and Slabs together) which is complex in nature and it has been also observed that in certain case there is confusion in assigning a consumer to a particular consumer category in certain cases. In light of the above, Distribution Licensee would like **to propose the rationalization of tariff structure by merging certain sub categories, slabs or shifting of certain sub-categories to separate categories** based on certain principles. The summary of rationalization of tariff categories are given below

- Merging of sub-categories and certain slabs under LT-Domestic to remove the current complexity of load and consumption limits and implementing a non telescopic tariff structure.
- Merging of sub-categories and slabs under LT-Commercial
- Merging of sub-categories in certain other categories and defining the meaning of the category
- Introduction of new category LT-IV (Specific Purpose) in place of the existing LT-IV (Cottage Industries, Dhobi Ghats and Others) and to move certain sub-categories from existing tariff structure which are currently enjoying cross subsidy / subsidy.
- Merging of certain categories or sub-categories in HT

Distribution Licensee proposes to modify the tariff by increasing Energy charges for all consumers except Agricultural consumers (LT –V) and introducing Fixed / Demand charges or increasing the existing Demand charges wherever applicable.

Distribution Licensee proposes to introduce Fixed/ Demand charges for the following consumer categories

- LT-Street Lighting
- LT-Temporary Supply
- HT-Ferro Alloy Units
- HT-Green Power

Distribution Licensee proposes an increase of the Demand Charges for the following consumer categories

- LT-Non Domestic/Commercial
- LT-Industrial
- LT-Specific Purpose
- LT-Public water supplies (PWS Schemes)
- HT-Industrial
- HT-Others (Commercial)
- HT-Aviation
- HT-Townships and Residential Colonies
- HT-Temporary

The changes / modifications in tariff for consumers in these categories are proposed due to increase in Cost-to-Serve. The distribution licensee expects to gain Rs. 5661.56 Crores, additionally due to these changes / modifications in tariff at the state level.

Distribution Licensee also proposes to levy of Demand charges on a kVA basis. For the purpose of billing, HP and KW will be considered equivalent to kVA.

Unless otherwise mentioned the definition of category or sub-category remain unchanged. In case of any merging of sub-categories/ category the definitions should be clubbed together. Other than the changes / modifications in tariff for the consumer categories mentioned above, the other aspects of tariff / charges such as customer charges (if any), power factor surcharge (if any), load factor incentives (if any), voltage surcharge (if any), minimum charges (if any), to be levied from all consumers are proposed to remain the same as mentioned in tariff order for FY 2012-13.

The rationalized tariff structure and the changes / modifications in tariff for consumers in these categories are as detailed in sections below.

Tariff Proposals

The following section lists in detail the proposed rationalized tariff structure and modifications in the tariffs for different consumer categories.

- The definition of any consumer category is proposed to remain the same unless and otherwise mentioned in this section.
- The definition of categories or sub categories which have been merged or moved has to be modified accordingly to reflect the new consumer mix.

- **LT-I: Domestic**

The tariff order for FY 2012-13 had provided two sub categories based on the contracted load. Subsequently, the Hon'ble Commission had revised the tariffs and provided the consumers with contracted load >500 W and consumption up to 100 units telescopic benefit for 0-50 units with additional subsidy borne by the Government. The licensee would like to bring to the notice of Hon'ble Commission that the current slab structure of LT-Domestic is complex and difficult to manage. Due to the telescopic tariff structure, consumers are getting benefited for the first consumption up to 0-300 units. As a result, there is a huge difference between the tariff for 0-50 slab and >500 slab with the tariff for >500 slab equal to 5 times the tariff for 0-50 slab.

Hence, the licensee after careful consideration would **like to propose a non telescopic tariff structure** in place of the existing telescopic tariff structure. Under this, the tariff payable by the consumer would depend on the total consumption during that month. This will encourage the consumer to consume less to avoid higher tariffs and obtain subsidy from the Government for less consumption.

In addition, the non telescopic tariff structure would encourage consumers to adopt energy conservation principles which would reduce the overall demand at the grid level and enable the licensee to manage the grid demand comfortably during the peak load hours.

The licensee proposes a non telescopic tariff structure for domestic consumers as shown below

Proposed Slab structure (Units)	Proposed Energy charge (Rs. /Unit)
0-50 (Consumption <=50 units)	1.45
0-100 (Consumption >50 units and <=100 units)	2.60
0-200 (Consumption >100 units and <=200 units)	5.65
0-300 (Consumption >200 units and <=300 units)	6.15
0-500 (Consumption >300 units and <=500 units)	6.50
0->500 (Consumption >500 units)	7.00

The licensee does not propose any increase in the tariff for 0-50 and 0-100 slab.

Illustration

The below table contains details of the monthly bill of a consumer with contracted load >500W who consumes 250 units in a month at the current tariff and proposed tariff

4.3 Non Tariff Proposals

Realization of actual Distribution losses and Agricultural sales

The Distribution licensee has considered the loss figures as approved by the Hon'ble Commission for the period FY 2010-11 to FY 2013-14 as given in Annexure-C of the Tariff Order for 2010-11 issued by the APERC. The actual losses of the licensee are more than the approved losses. The Distribution licensee has considered Agricultural sales as approved by the Hon'ble Commission for the ARR filings prior to FY 2013-14. The licensee would like to submit to the Hon'ble Commission that the actual agricultural sales have been much higher than the approved sales. The

The additional power requirement due to higher losses and additional agricultural sales will have to be purchased at a marginal cost of Rs. **10.00/Unit** or as applicable by the licensee.

The above cost is not been considered/ captured while determining the FSA due to non inclusion of cost in formula as per the existing regulation. Similarly, Regulation 4 of 2005 does not cover the mechanism to recover additional cost incurred by the Licensee. By not recognizing this huge cost by the Hon'ble Commission, Licensees are losing around 10 times of their current Return of Equity. In light of the above, Licensee humbly requests the Hon'ble Commission to devise an appropriate mechanism to recover the additional cost either through FSA or true-up mechanism. Licensee also requests the Hon'ble Commission to limit the penalty linking to Return on Equity subject to maximum of 3% of ROE similar to Transmission Licensee.

4.4 Other Proposals

- **Cross subsidy surcharge determination for FY 2013 - 14:**

Provisions under the National Tariff Policy – 2006

Cross subsidy and additional surcharge for open access

When open access is allowed the surcharge for the purpose of sections 38,39,40 and sub-section 2 of section 42 would be computed as the difference between

- (i) The tariff applicable to the relevant category of consumers and
- (ii) The cost of the distribution licensee to supply electricity to the consumers of the applicable class

In case of a consumer opting for open access, the distribution licensee could be in a position to discontinue purchase of power at the margin in the merit order. Accordingly, the cost of supply to the consumer for this purpose may be computed as the aggregate of

- (a) The weighted average of power purchase costs (inclusive of fixed and variable charges) of top 5% power at the margin, excluding liquid fuel based generation, in the merit order approved by the SERC adjusted for average loss compensation of the relevant voltage level and
- (b) The distribution charges determined on the principles as laid down for intra-state transmission charges.

Surcharge formula:

$$S = T - [C (1 + L / 100) + D]$$

Where

S is the surcharge

T is the Tariff payable by the relevant category of consumers;

C is the Weighted average cost of power purchase of top 5% at the margin excluding liquid fuel based generation and renewable power

D is the Wheeling charge

L is the system losses for the applicable voltage level, expressed as a percentage

The Hon'ble commission, in 2012-13 determined the Cross Subsidy Surcharge for various categories of consumers based on the embedded cost methodology. The Commission is of the opinion that Embedded Cost Approach is the most appropriate approach since the embedded accounting costs are actually used to allocate costs to various consumer categories and to determine the current level of cross-subsidy.

As per National Tariff Policy, the Cross Subsidy Surcharge has to be determined based on avoided cost methodology. In view of this, the licensee would like to file a proposal for determination of cross-subsidy surcharge for Open Access transactions along with this ARR filing for FY 2013-14. It may be noted that the licensee has adopted the methodology stated in the National Tariff Policy for determination of the cross-subsidy surcharge. The Cross Subsidy as computed by the licensee for each category is as shown below:

AB Switches are being erected wherever necessary as per the system requirement for proper control of Agl Feeders.

The details of the AB switches provided in each district under HVDS scheme is as follows:

Sl. No.	Name of the District	No of AB Switches erected as on 31-10-2012

7. DTR Location for Residential and Commercial Complexes

The Licensees are directed to issue notices in all such cases, where the transformers are erected outside the premises, directing the concerned to shift the transformers within 3 months into their respective premises. The DISCOMs shall not henceforth extend power supply in all those cases where the transformers have been erected outside their premises. A consolidated quarterly compliance report on action taken may be sent to the Commission..

Discom:

The directive is being complied with – Instructions are issued to all the Superintending Engineers/Operation

- ii) To provide a list of such locations of the premises where the DTRs are existing outside the consumer premises and to serve notices to such consumers to shift the DTRs inside the consumer premises.

8. Safety

The Commission had given directions earlier in the matter. The directives should be complied with. This is a very serious matter and needs to be implemented on high priority. The Licensees are directed not to extend power supply by using 6.3 kV single phase distribution transformers without providing neutral wire from the sub station henceforth. In respect of all existing systems neutral wire shall be provided. Contravention of above direction will attract penal provisions under sec 142 of Electricity Act 2003

Discom:

The directions of the Hon'ble APERC are noted as to strictly provide neutral wire from the substation to extend power supply by using 6.3 KVA single phase distribution transformers.

In compliance with the above directions under section 142 of Electricity Act, 2003, the APCPDCL is making every effort to provide neutral wire where ever necessary in a phased manner in the existing system.

However, it is to recall that all HVDS works are being taken up on Rural Agricultural feeders by replacing high capacity distribution transformers with small capacity by providing local earthing with two CI earth electrodes as per specifications.

Since the Hamlets are situated in interior rural areas, laying neutral wire from substation and earthing at intermediate locations needs additional expenditure. In view of the constraints, it is for providing local ground earthing by maintaining the earth resistance as per REC construction standards. Further, the villages located beyond 3 Kms radius from substation, more particularly in rocky areas with poor resistance, could be provided with master earth. The APCPDCL has already rectified and refurbishment the earthing system for 11452 single phase distribution transformers in all seven Districts. All arrangements are being made for strict compliance with aforesaid directions

please.

5.2 FRESH DIRECTIVES FOR FY 2012-13

1. Sales Estimation to LT-V

The Licensees shall estimate the consumption based on the Commission approved new methodology and incorporate the results in detail in next Tariff filings without fail.

Discom:

Agriculture consumption is being calculated with ISI methodology from Sep'12 for Anantapur, Kurnool, Nalgonda, Ranga Reddy (East), Ranga Reddy (North), Ranga Reddy (South) circles. However, for Mahaboobnagar and Medak circles, installation of DTR meters is completed. But due to the middling of meters by the farmers, the estimated consumption could not be carried out in Mahaboobnagar and Medak circles. However, the consumption is being arrived for other circles as per ISI methodology i.e. Anantapur, Kurnool, Nalgonda, Ranga Reddy (East), Ranga Reddy (North), Ranga Reddy (South) .

Discom:

In APCPDCL, in order to comply one of the initiatives of energy conservation the replacement of the ICLs with CFLs in APCPDCL jurisdiction has been taken up under Bachat Lamp Yojana in coordination with Bureau of Energy Efficiency (BEE). M/s C-Quest Capital Green Ventures Private Limited have been entrusted the above job. About 16.5 Lakhs CFLs have been distributed to households in 6 – operation divisions as part of EC measures. This will be continued with the same spirit in APCPDCL in a large scale for the rest of the areas. The quantum of energy being saved due to usage of CFLs in place of ICLs is assessed to the tune of 100 MW (approx) as of now. The progress achieved on distribution of CFL is shown below.

7. Agricultural consumption estimate

Under fresh Directives No. 2 of the Tariff Order for FY 2011-12, the Licensees were directed to report the progress on implementation of new methodology to estimate on Agricultural consumption, on their respective websites. But, the progress achieved in this regard is observed to be very poor.

The DISCOMs have taken up the work of executing the HVDS scheme for 11 kV Agricultural feeders. In this regard, the Licensees are directed to furnish the report on fixing of meters to each of the transformers covered under HVDS scheme, within one month. Also, the DISCOMs are directed to furnish the mid-year report (i.e. for the period from 01-04-2012 to 30-09-2012) on meter-wise readings noted and transformer-wise, feeder-wise consumptions measured on all the DTRs & feeders covered under HVDS scheme

Discom:

The progress on implementation of ISI methodology will be kept in CPDCL website shortly.

The APCPDCL has taken decision to fix up energy meters to all small DTRs covered under HVDS schemes funded by JICA. The tendering process of HVDS JICA project was under progress.

6. COST OF SERVICE FOR FY 2013-14

6.1 Introduction

This report presents the estimated cost of service for various consumer categories of the Central Power Distribution Company Limited (APCPDCL), for the year starting on April 1, 2013 and ending on March 31, 2014. The objective of this report is to classify the costs into demand; energy and customer related components and then apportion the same to various customer categories.

The steps involved in the analysis are:

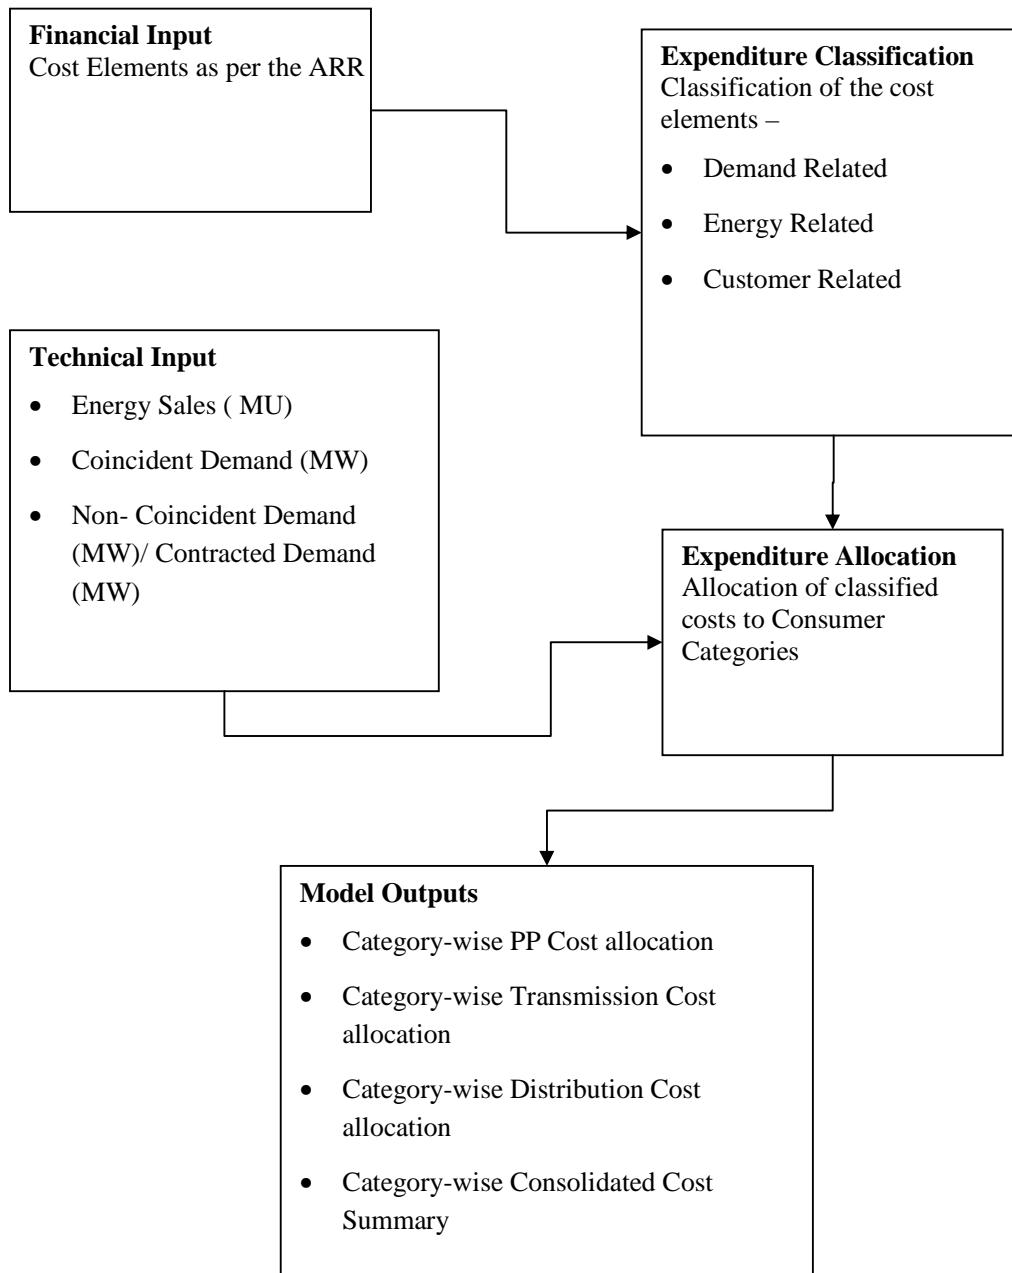

- Forecasting the energy and peak demand requirements for the power system in the year under consideration;
- Forecasting the energy and peak demand requirements at the transmission-distribution interface in that year;
- Estimating the energy and peak demand requirements for each customer category for that year;
- Estimating the costs of providing the energy and peak demand required for each customer category; and
- Classifying and allocating the above costs to various consumer categories of APCPDCL at the retail level.

6.2. COST OF SERVICE MODEL FOR APCPDCL

The cost of service calculations are based on the cost of service model developed for CPDCL. The model, as currently used, calculates the cost of serving all customers categories of APCPDCL.

All financial input into the model is as per the ARR for the year 2013-14, including revenue, and expenditure data.

The following section gives a brief overview of the Cost of Service model developed for AP CPDCL

Financial Input Sheet

This forms the base for the income and expenses data for the APCPDCL. The values are as per the ARR for the year 2013-14.

Technical Input Sheet

This part includes the system data required for the cost of service calculation. The energy and losses in the system are included along with the data regarding the customers responsible for the corresponding sales and losses. The percentage loss quoted is the loss in the distribution system and hence accounts for the energy that is unavailable for sale to the retail customers.

APCPDCL customers are segregated into LT and HT customers, which includes EHT (220 kV and 132 kV), Sub-transmission (33kV) and distribution (11kV and LV). The EHT customers are also included as APCPDCL customers, even though they may be connected at 220 kV or 132 kV. In this study, technical losses experienced in EHT system are covered by EHT, 33kV, 11kV and L.T loads. Hence they need to be apportioned to all loads in the system.

The HT customer categories in the APCPDCL system are;

HT Customers

- Industrial – Cat- I (11KV, 33KV and 220/132 KV)
- HT Others – Cat- II (11KV, 33KV and 220/132 KV)
- Irrigation and Agriculture – Cat-IV (11KV, 33KV and 220/132KV)
- Railway Traction – Cat V (132KV)
- Colony Consumption (11KV, 33KV)
- Temporary

The LT (400 Volts) customer categories in the APCPDCL system are;

LT Customers

- Domestic – category I
- Non-domestic – category II
- Industrial – category III
- Cottage industries – category IV
- Irrigation and Agriculture – category V
- Public lighting – category VI
- General purpose – category VII
- Temporary – category VIII

Energy Sales in MU, Non- coincident demand and coincident demand data is entered for the above customer categories

The coincident demand is the estimated contribution of each category to the system peak demand and the non-coincident demand has been estimated from system load shapes derived and represents the peak demand of each customer category, irrespective of the time of day. Values used in this analysis are shown in Table 2-1.

Table 2-1

Coincident Factors and Load Factors used		Coincidence Factor	Class Load Factor
L.T Customers			
Domestic Category – Category – I		78.6%	78.33%
Non-Domestic – Category – II		90%	74.63%
Industrial – Category – III		98.6%	77.62%
Cottage Industries – Category IV		98.6%	77.62%
Irrigation and Agriculture – Category V		86.7%	65.57%

	33KV	92.4%	81.24%
	220/132 KV	97.6%	85.04%

	220/132 KV	65%	63.83%
	11KV	90.9%	80.92%
Railway Traction – Category – V (132KV)		83%	73.55%
Temporary		91%	80.92%
Colony Consumption – 11KV		91%	80.92%
Colony Consumption – 33KV		92%	71.90%

The DISCOM peak demands, both coincident and non-coincident are estimated using basic load shape synthesis model. Load shapes of different categories of consumers are constructed based on the Load Shapes data collected from the field. The following tabulation provides a derivation of the coincident peak demand, along with the assumptions for APCPDCL used in that derivation:

CENTRAL	Energy (MU)	Coincident Demand (MW)
Sales	38,551	4995
Loss as % of input	11.79%	14.60%
Losses	5150.57	854
Sub Total	43701	5848

The load factor and coincidence factor included in the Model for each category are assumed based on a review of the characteristics of the loads and load mix in APCPDCL. The system peak demand of APCPDCL is occurring during 11.00 hrs.

Expenditure Functionalization

The new model is developed keeping in view the unbundled nature of the power sector in A.P, hence the expenditure pertaining to CPDCL is taken as per the ARR in the financial input sheet.

- Power Purchase Cost
 - Transmission & SLDC Charges
 - Repairs and maintenance
 - Employee costs
 - Administration and general expenses
 - Depreciation
 - Interest and financial charges
 - Other expenses
-

Expenditure Classification

This section classifies the expenditure into demand, energy and customer related items. The options with respect to classification are;

- Demand
- Energy
- 80% Demand , 20% Customer
- Customer
- Manual entry

The fixed costs in the power purchase are treated as demand related expense and the variable cost of power purchase is treated as energy related expense.

Entire transmission cost is considered to be a demand related expense. The O & M expenditure in distribution is classified into demand and customer related in the ratio of 80:20. The same has been arrived at based on subjective judgment, as it is felt that some portion of the assets and employee expenses are used for catering to the needs of the customer such as customer service/call centers. The other cost elements in distribution viz ROCE, depreciation and other costs have been fully considered under demand related costs.

Expenditure Allocation

The expenditures, which have been classified into, demand, energy and consumer related are apportioned to the individual customer categories.

Power Purchase Cost Allocation:

Demand related costs of Power Purchase are primarily driven by the system peak. Hence they are allocated to customer categories based on the Coincident Demand. Energy costs in Power Purchase are allocated based on the loss-adjusted category energy consumption.

Transmission Cost Allocation:

The transmission costs (including PGCIL and ULDC) are considered as demand related cost and the same is allocated to LT categories based on Non-coincident demand and contracted demand (CMD) for HT categories

Distribution Cost Allocation:

a) Operation and Maintenance Expenditure

The demand related portion of O & M expenses are allocated to LT consumer categories based on non -coincident demand and contracted demand (CMD) for the HT consumer categories.

The customer related costs are allocated to customer categories based on the number of customers in each category.

b) ROCE

Return on capital employed is driven by assets and it is fully considered as demand related expense. ROCE is allocated to LT consumer categories based on non -coincident demand and contracted capacity for the HT consumer categories.

c) Depreciation

Depreciation expense is driven by the level of fixed assets in the utility and is entirely considered under demand related expenses. Depreciation is allocated to LT consumer categories based on non -coincident demand and contracted capacity for the HT consumer categories.

d) Interest on Consumer Security Deposit

This is allocated to consumer categories based on the energy consumption grossed up for losses.

Summaries of the results of the model are the outputs and these are discussed in the next section and a comparison of revenues and costs by customers is made in this part of the computation.

6.3. Results

The following tabulation summarizes the results of the process:

- APCPDCL needs to handle 43,702 MU, which consist of sale of 38,551 MU to its customers and losses of 5151 MU.
- Coincident Peak demand required by APCPDCL is 5848 MW, which consist of 4995 MW to serve the customers, and 854MW of losses in the system.
- The average unit cost of supplying the customers of APCPDCL is estimated at **5.37** Rs/kWh.
- The expected unit revenue from APCPDCL customers at current tariff is **3.77** Rs/kWh.

Table-3.1 compares the cost of service and revenue expected from current tariffs for the major categories and **Table – 3.2** provides detailed results for each category:

- Revenue and unit revenue at current tariffs.
- Allocated cost and unit allocated cost
- Revenue to cost ratio
- Weightage of each category
